## REASONS FOR ALLOWANCE

### *Allowable Subject Matter*

1. Claims 13-15, 18-25 and 29-31 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

In the Examiner's opinion, the prior art of record either singularly or in combination fails to teach a computerized method for selecting from a plurality of service providers a service provider that provides a radio communication service that can be received by a mobile station via a radio access network wherein: a request is received from the mobile station to select a service provider for a service from the plurality of service providers, the plurality of service providers are requested to indicate a value of a selection parameter, the plurality of service providers indicate respective values within a first time interval, the values are compared with each other to perform an initial selecting of a service provider based on the most favorable values received after the first time interval, at least a portion of the plurality of service providers are re-requested to indicate a new value of the selection parameter, the portion of service providers is notified of the most favorable value from the values received so that at least one service provider can provide a new value to undercut the most favorable value, after a second time interval, a service provider is selected based on the values received from the indication request, in the event the received new values of at least two service providers have an identical value, the service provider is selected on a random basis, however, in order to pre-empt random selection, said at least two service providers are notified of the identical values so that at least one service provider can change its own identical value.

Engelhart (US Patent Publication No. 2004/0203580 A1), in view of Spear et al. (Spear) (US Patent No. 6,853,621 B1), discloses an automatic method for selecting service providers in a random access network wherein: a mobile station requests

services from a plurality of service providers, the service providers are queried for capability and cost information, a service provider is automatically selected based on the initial capability and cost information received, service providers are periodically requested to provide updated capability and cost information based on subscriber defined rules, automatically authorizing an alternate network configuration if a better or cheaper one is found and in the event the received updated capability and cost information of at least two service providers have an identical value, selecting a service provider on a random basis.

The prior art of record either singularly or in combination fails to teach notifying service providers of the most favorable value from the values received so that at least one service provider can provide a new value to undercut the most favorable value. As well as failing to teach pre-empting random selection by notifying service providers of identical values so that at least one service provider can change its own identical value. Therefore, the prior art of record either singularly or in combination fails to teach the above claimed limitations for claim 13 and claim 25 and is therefore the reason for allowance. Claims 14-15 and 18-24 are dependent on claim 13 and are therefore allowed under the same reasons set forth above. Claims 29-31 are dependent on claim 25 and are therefore allowed under the same reasons set forth above.

### ***Conclusion***

3. The prior art not relied upon but considered pertinent to applicant's disclosure is made of record and listed on form PTO-892.
